

## About Us

A local metal manufacturer serving the Grand Strand of South Carolina. We are a team of designers, craftsmen and dedicated problem-solvers. We take great pride in offering American made, hand-crafted and plasma cut products to our clients on a local, and national level.

It is our desire at Control Solutions Group to produce incredible results while building strong relationships with our clients. From the design and manufacture of your prototype to the production, quality-assurance inspection, and delivery of your goods, we look forward to assisting you with the production of your project.

## Our Services & Capabilities

Custom metal fabrication is our expertise, and we're confident that we can design and manufacture the metal configuration you need. In addition to standard metal fabrication services using plasma computer numerical control (CNC) services, we offer welding, grinding, CAD and Design.

- ★ CNC Plasma Cutting
- ★ Welding
- ★ CAD & Design

**As a local metal manufacturer** serving the Grand Strand of South Carolina, we take great pride in offering American made, plasma cut products to our clients on a local, and national level. It is our desire at Control Solutions Group to produce incredible results while building strong relationships with our clients.

**Plasma cutting** has a number of advantages over other forms of metal cutting, which explains why we use it extensively in order to give customers the products they're looking for. Plasma metal cutting can be used on all electronically conductive materials; it's particularly suitable for cutting steel. Plasma cutting is a fast technique which also transfers minimal heat to the material being cut. This benefit reduces the risk of cracking or warping which a rapid, significant influx of heat to an area can cause.

**Our services** are ideal for more challenging jobs – We stock a variety of material, and can order in most other sizes in just a day or two.

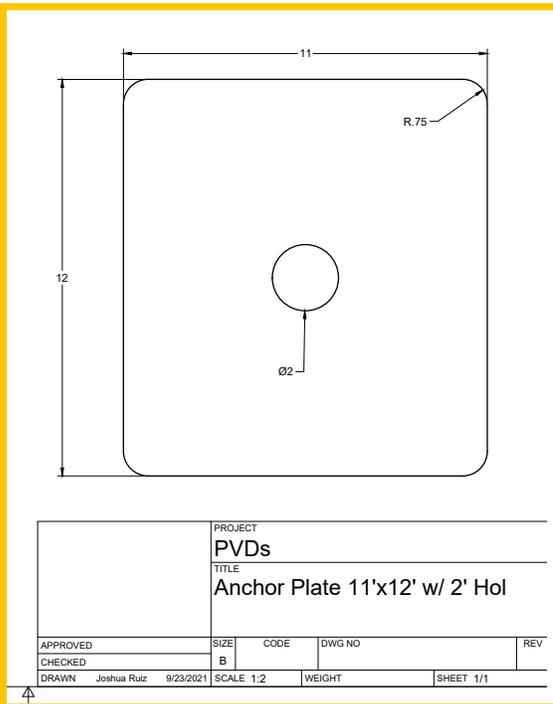

**Our Equipment Includes:** Hypertherm Powermax65 XP CNC Plasma with Machine Torch with THC that can cut Expanded and Corrugated Metals

**Table Size:** 5' x 10'

**Cutting Capacity:**

- Carbon Steel -.018" to 1"
- Stainless Steel - up to 3/4"
- Aluminum - up to 3/4"

Just tell us what you need and we will rise to the challenge! We look forward to assisting you with the production of your project.
